Annotation

The present paper presents the general geographical characteristics of the municipality of Aspindza and the problems of sustainable development. It is characterized by sustainable natural conditions, information about demographics, relief and soil characterization, which can be found in the municipality. Also important news is the hydrographic network and orography, the mountain passes, which are also presented in the paper. Due to the historical situation, settlements and natural as well as cultural sights have been allocated in Aspindza municipality.

The main forms of natural resources and minerals are separated. As well as the main landscapes of the municipality. The main part of the paper is based on the Soviet topographic map.

Environmental and sustainable development problems play an important role in the paper.
