## **Anotation**

The history of world wars is rich in examples, where the fate of combat operations is largely, it depended on the judicious use of geographical factor. Georgia has a historically difficult geographical and geopolitical location, which is reflected in its current political situation. The military reconstruction of a country should be firmly based on the development of military and related social, natural or technical sciences. In addition, one of the important places is occupied by military geography. Recent developments in our region confirm that military reconstruction is one of the country's foremost tasks.

The paper presents Georgia's defense capabilities, types of fortifications from ancient times to the present day. The role of military geography and military engineering geography in the modern world is discussed. The role of geographical actors in military activities is also clearly presented. Ecological consequences of Belligerent anthropogenic landscapes.
