Department of Geography, Faculty of Exact and Natural Sciences, Ivane Javakhishvili Tbilisi State University, I.  
Chavchavadze Avenue. #3, 0179, Tbilisi.

The work consists of three chapters. The area of research is the territory of coastal Adjara, which includes the downstream basins of rivers Chakvistskali and Choloki.

The first chapter discusses the diversity of the natural environment. Which includes relief, climate, inland waters, soil-vegetation cover and etc. Where the emphasis is placed on anthropogenic transformation and aspects of preservation, restoration and reproduction of the environment. Soil cover and current condition are also discussed.

The second chapter is dedicated to the transformation of the natural environment. This chapter discusses natural disasters, environmental problems in the atmosphere. The above mentioned chapter concerns ecological problems of the Black Sea.

The third chapter analyzes landscape potential and natural use issues. Recommendations and conclusions are given. The survey is based on a multi-component approach. It is not limited to one of the methods. The study uses a descriptive, cartographic, field and comparative analysis.
